# Sustainability standards and similar systems

# ISEAL Codes of Good Practice

## Standard-Setting Code

promotes meaningful participation and local relevance of the standard

## Impacts Code

helps standards systems define and measure their impacts and improve their practices

## Assurance Code

supports rigorous and consistent assessments of compliance using different models

We are revising and integrating the ISEAL Impacts, Standard-Setting and Assurance Codes of Good Practice.

Take part in our Code of Good Practice public consultation:

## About the research

This research report is authored by [AidEnvironment](#) and commissioned by ISEAL and a refresh of the [2016 review and synthesis](#) of literature and evidence of the business benefits of adopting sustainability standards. In total 40 credible source

documents, covering seven sectors, were reviewed. Businesses in the scope of this review included **upstream businesses and downstream businesses**. Full details are available in the main report. [Read the full report](#).

## Sectors covered by the research

AGRICULTURE

FISHERY &  
AQUACULTURE

FORESTRY

MINING &  
JEWELLERY

BIOMASS

TOURISM

CARBON

# Business benefits of using sustainability standards

## Long term benefits

% refers to proportion of studies reporting a benefit

**Growth** in production or sales

**Improved** reputation

**Sustainability** impact

**Upstream businesses** represent raw material extraction or product production, including large-scale producers, smallholder producer groups and primary processors in the country of origin.

**Downstream businesses** include importers, processors, manufacturers, brand and retail companies in manufacturing and consumer countries.

# Business benefits of using sustainability standards

## Short term benefits

% refers to proportion of studies reporting a benefit

↔  
**Improved** sustainability strategy

→  
**Better** supply chain coordination

←  
**Operational efficiency** & risk management

↔  
**Improved** market access

↔  
**Better** access to knowledge & support

↔  
**Improved** sector alignment & coordination

# Sustainability standards and the SDGs

**8** DECENT WORK AND  
ECONOMIC GROWTH

## **SDG 8:**

Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all.

**MSC, South Africa**

Estimated **certification benefits** for South African **hake fishery**<sup>2</sup>

**37.6%**

of current **estimated net value**

# Sustainability standards and the SDGs

## Energy efficiency

The adoption of sustainability standards can significantly reduce the energy footprint of farming and fishing.

### ASC, Vietnam

# Key features: Visual Summaries

Evidensia’s [Visual Summaries](#) plot data from systematic research reviews we’ve conducted and help users make sense of what the available evidence says on key research questions.

# Evidensia is an ambitious effort to inform sustainability action and policy with credible evidence.

**Global**

**Growing**

**Trusted**

**Research-led**

**User-friendly**

- Users from across 170 countries
- 23000+ users in the last 18 months with 20% return users
- 950+ resources sharing credible evidence on impacts of market-based sustainability approaches
- Trusted by researchers and users
- 8 / 10 users say Evidensia meets all their needs
- 9/10 users say they recommend Evidensia to their networks

# Benchmarking overview

- › *to benchmark*: the act of determining alignment between systems
- › Types of benchmarking:
  - One-off benchmarking exercises
  - Benchmarking Programmes
    - » Example: Farm Sustainability Assessment →
    - » Example: policies like EU Renewable Energy Directive
- › Format dependent on objective and stakeholders

**100+**

**sustainability schemes**

benchmarked against the FSA

# Goals of benchmarking

- › Recognise **impacts**
- › Promote **consistency and alignment** between benchmarked entities (i.e., interoperability)
- › Build **awareness** (through transparency)
- › Drive **improvement**
- › Indication of **good practice**

# Benchmarking models

- › Threshold: entity meets or exceeds threshold. Often used in recognition
- › Ranking: compares performance of similar systems
- › Peer comparison: internal comparison of a system's performance against its peers
- › Improvement: encourages improved practice by showing progress
