34%

of British seafood consumers believe NGOs are contributing very well to protecting the oceans

National governments, large companies, media and retailers ranked as least effective

86% of Brits rate the MSC highly for helping to recognise and reward sustainable fishing

89% of Brits agree that the MSC label helps to identify sustainable seafood quickly and easily

As the world's most recognised seafood labelling and certification programme, consumers are positive that the MSC, and the thousands of organisations committed to using the blue MSC label, are contributing to the health of the world's oceans.

When asked which institutions they believed were contributing the most to protecting the oceans, respondents ranked NGOs and scientific organisations highest

12% of the world's wild-caught seafood comes from MSC-certified fisheries

35% of British seafood consumers understand what the blue MSC label means (up from 25% in 2016)

Understanding of the blue MSC label has increased on average since 2016

45% of British seafood consumers believe scientific organisations are contributing very well to protecting the oceans

31% of British seafood consumers believe NGOs are contributing very well to protecting the oceans

22 countries are represented in one of the largest ever global studies of seafood shopping habits

Independent labelling increases brand trust

NGOs and scientists are seen to contribute most to ocean protection

Demand for independent labelling of seafood is increasing globally

77% of those surveyed in Britain said there is a need for brands and supermarkets to independently verify their claims about sustainability (up from 70% in 2016)

69% of British seafood consumers say they'd like to hear more from companies about the sustainability of their seafood products

83% of British seafood consumers agree that we need to protect seafood supplies for future generations

Demand for independent labelling is increasing globally

Over 25,000 consumers (18,909 seafood consumers) in 22 countries took part in the research, which ensured a statistically representative sample in each country.

1,315 British consumers (1,020 British seafood consumers) took part in the UK.

About the survey

The Marine Stewardship Council has partnered with GlobeScan to conduct a global research study into consumer perceptions. This online quantitative study tracks a similar study in 2016. It adds to the growing evidence that ocean sustainability is a topic with global relevance and ranks high in seafood purchase decisions.

The survey was conducted online using large and reliable national consumer research panels to recruit respondents in each country. Fieldwork was staggered by market and conducted between 12th January and 10th March 2018.

Consumers in Australia, Austria, Belgium, Canada, China, Denmark, Finland, France, Germany, Italy, Japan, The Netherlands, New Zealand, Norway, Poland, Singapore, South Africa, Spain, Sweden, Switzerland, UK and USA took part. China was surveyed for the first time this year.

The main sample of fish and seafood consumers comprised a total of 18,909 consumers who said they or someone in their household had purchased fish or seafood in the last two months, out of a total sample size of 25,810.

For global results, each country is weighted equally, regardless of sample size.

About the Marine Stewardship Council (MSC)

The Marine Stewardship Council is an international non-profit organisation. We recognise and reward efforts to protect oceans and safeguard seafood supplies for the future. We want future generations to be able to enjoy seafood and oceans full of life, forever.
